Collecting Data from your Enterprise with PI

Operations Information Management with the PI System

Andrew Nathan, Presales Manager - AVEVA

AVEVA

PI System: trusted by essential industries for over 40 years

Oil & Gas

85%

of the top oil and gas
companies

Power & Utilities

1,000+

utilities worldwide

Mining & Metals

9

of the top 10 Mining
companies

Pharma & Life Sciences

24

of the top 25
Pharmaceutical companies

Chemicals

9

of the top 10 Chemical
companies

Manufacturing

6

of the World Economic Forum's
Factories of the Future

Better data. Better business outcomes.

Asset health

DCP Midstream saved

\$20-25 million

in first year

Energy efficiency

Air Liquide achieved

10x ROI

in operational savings in first 8 months

Process optimization

ArcelorMittal shipped

26M additional tons

for \$120M in added revenue

Quality tracking

Deschutes postponed

\$8 million

capital upgrade

Compliance & sustainability

TasWater sped up response time by

13 hours

and saved the local oysters

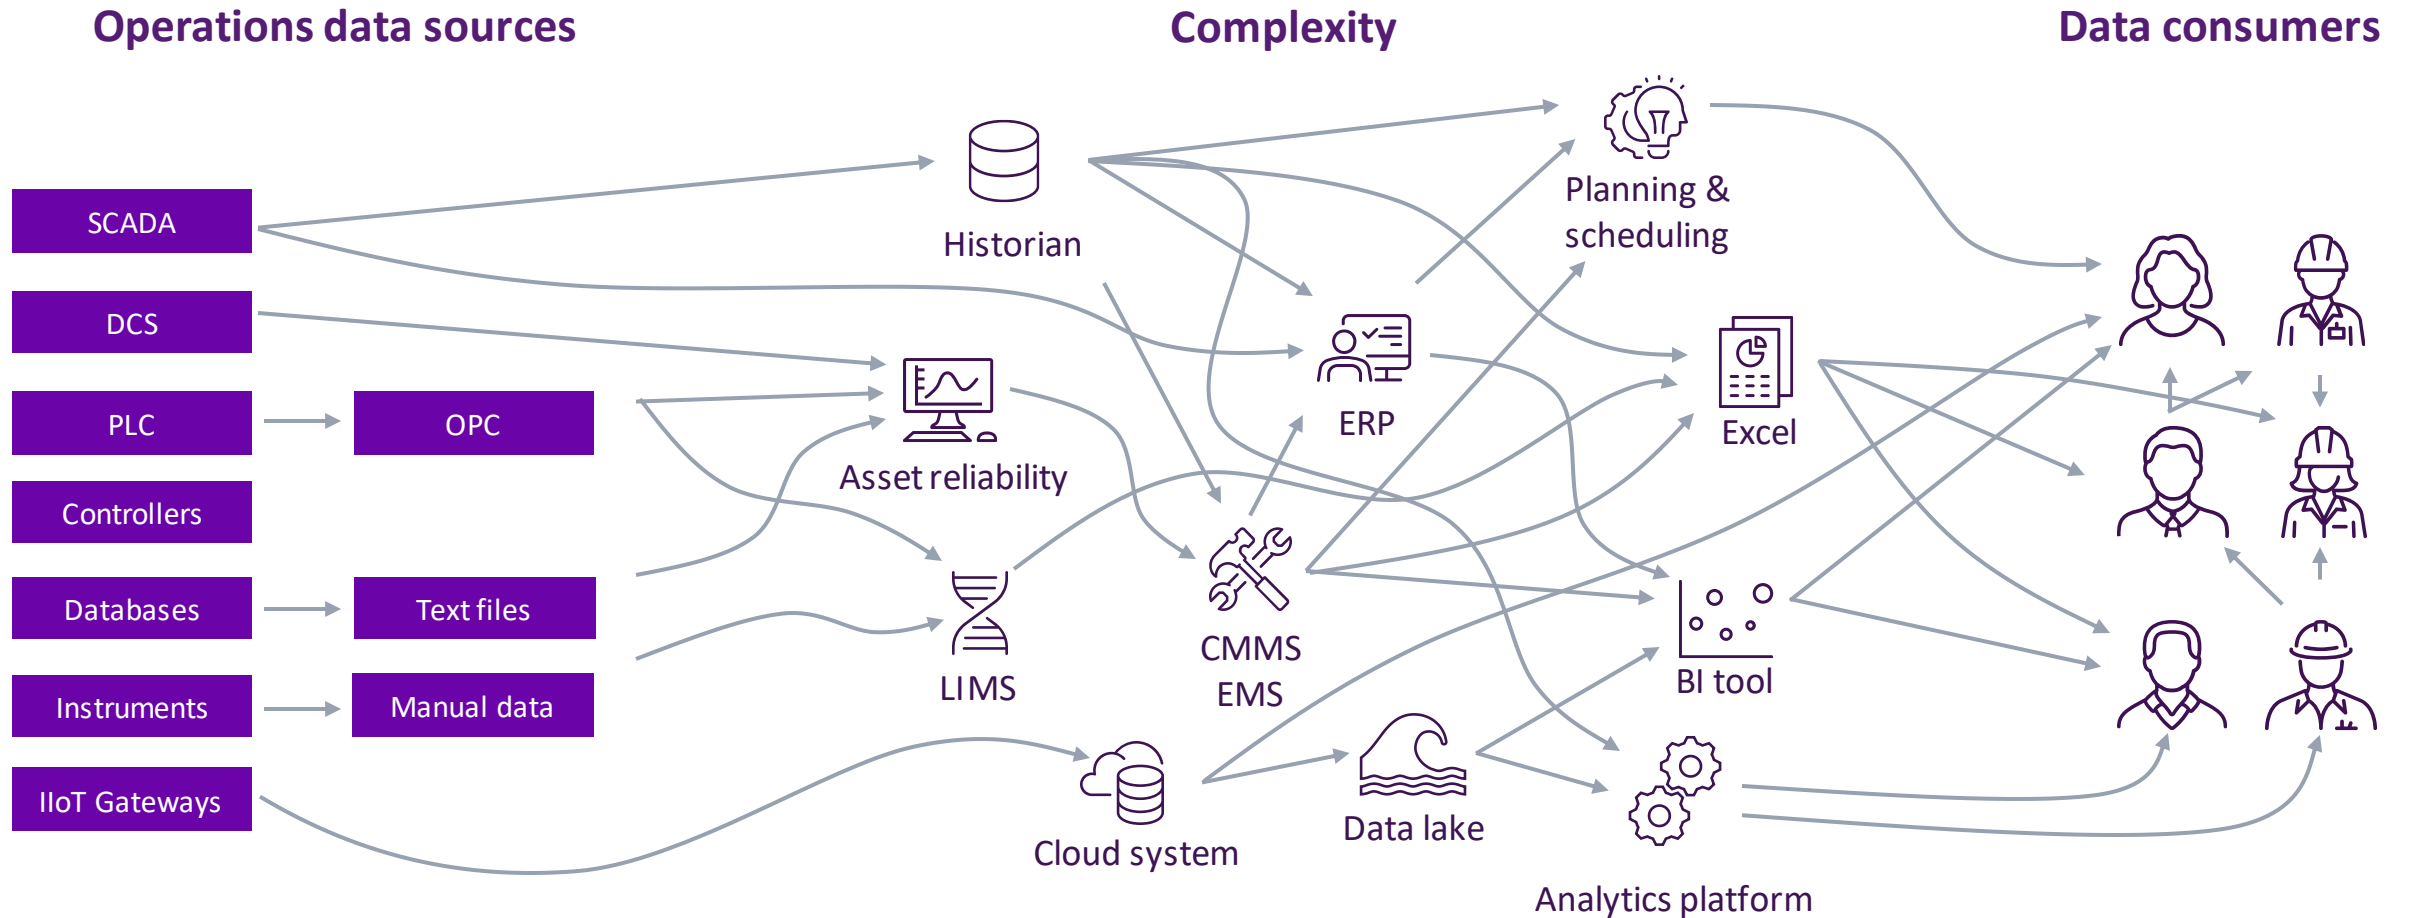

Safety & resilience

Qatar Power operated over

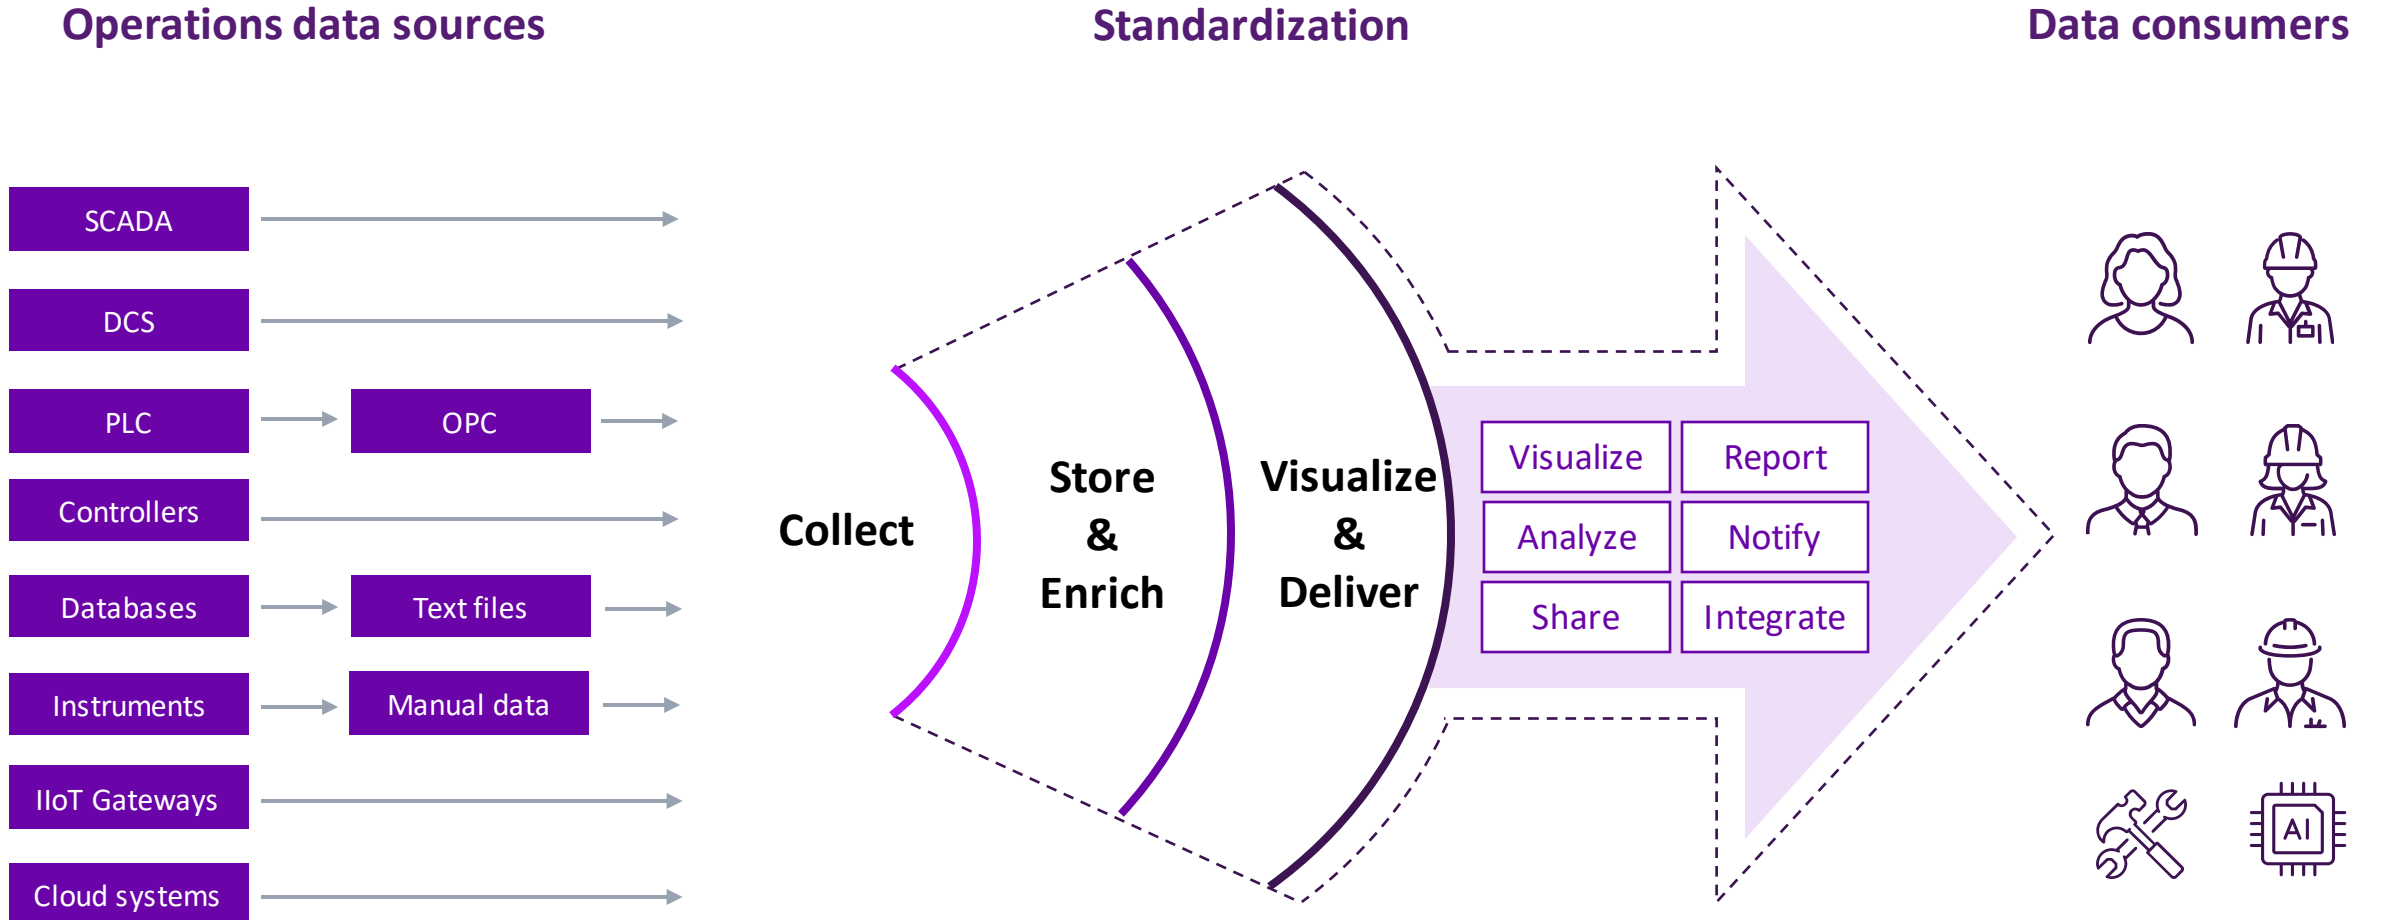

3,452 days

without lost-time accidents

Managing operations data is complex

Connect people to data with an infrastructure approach

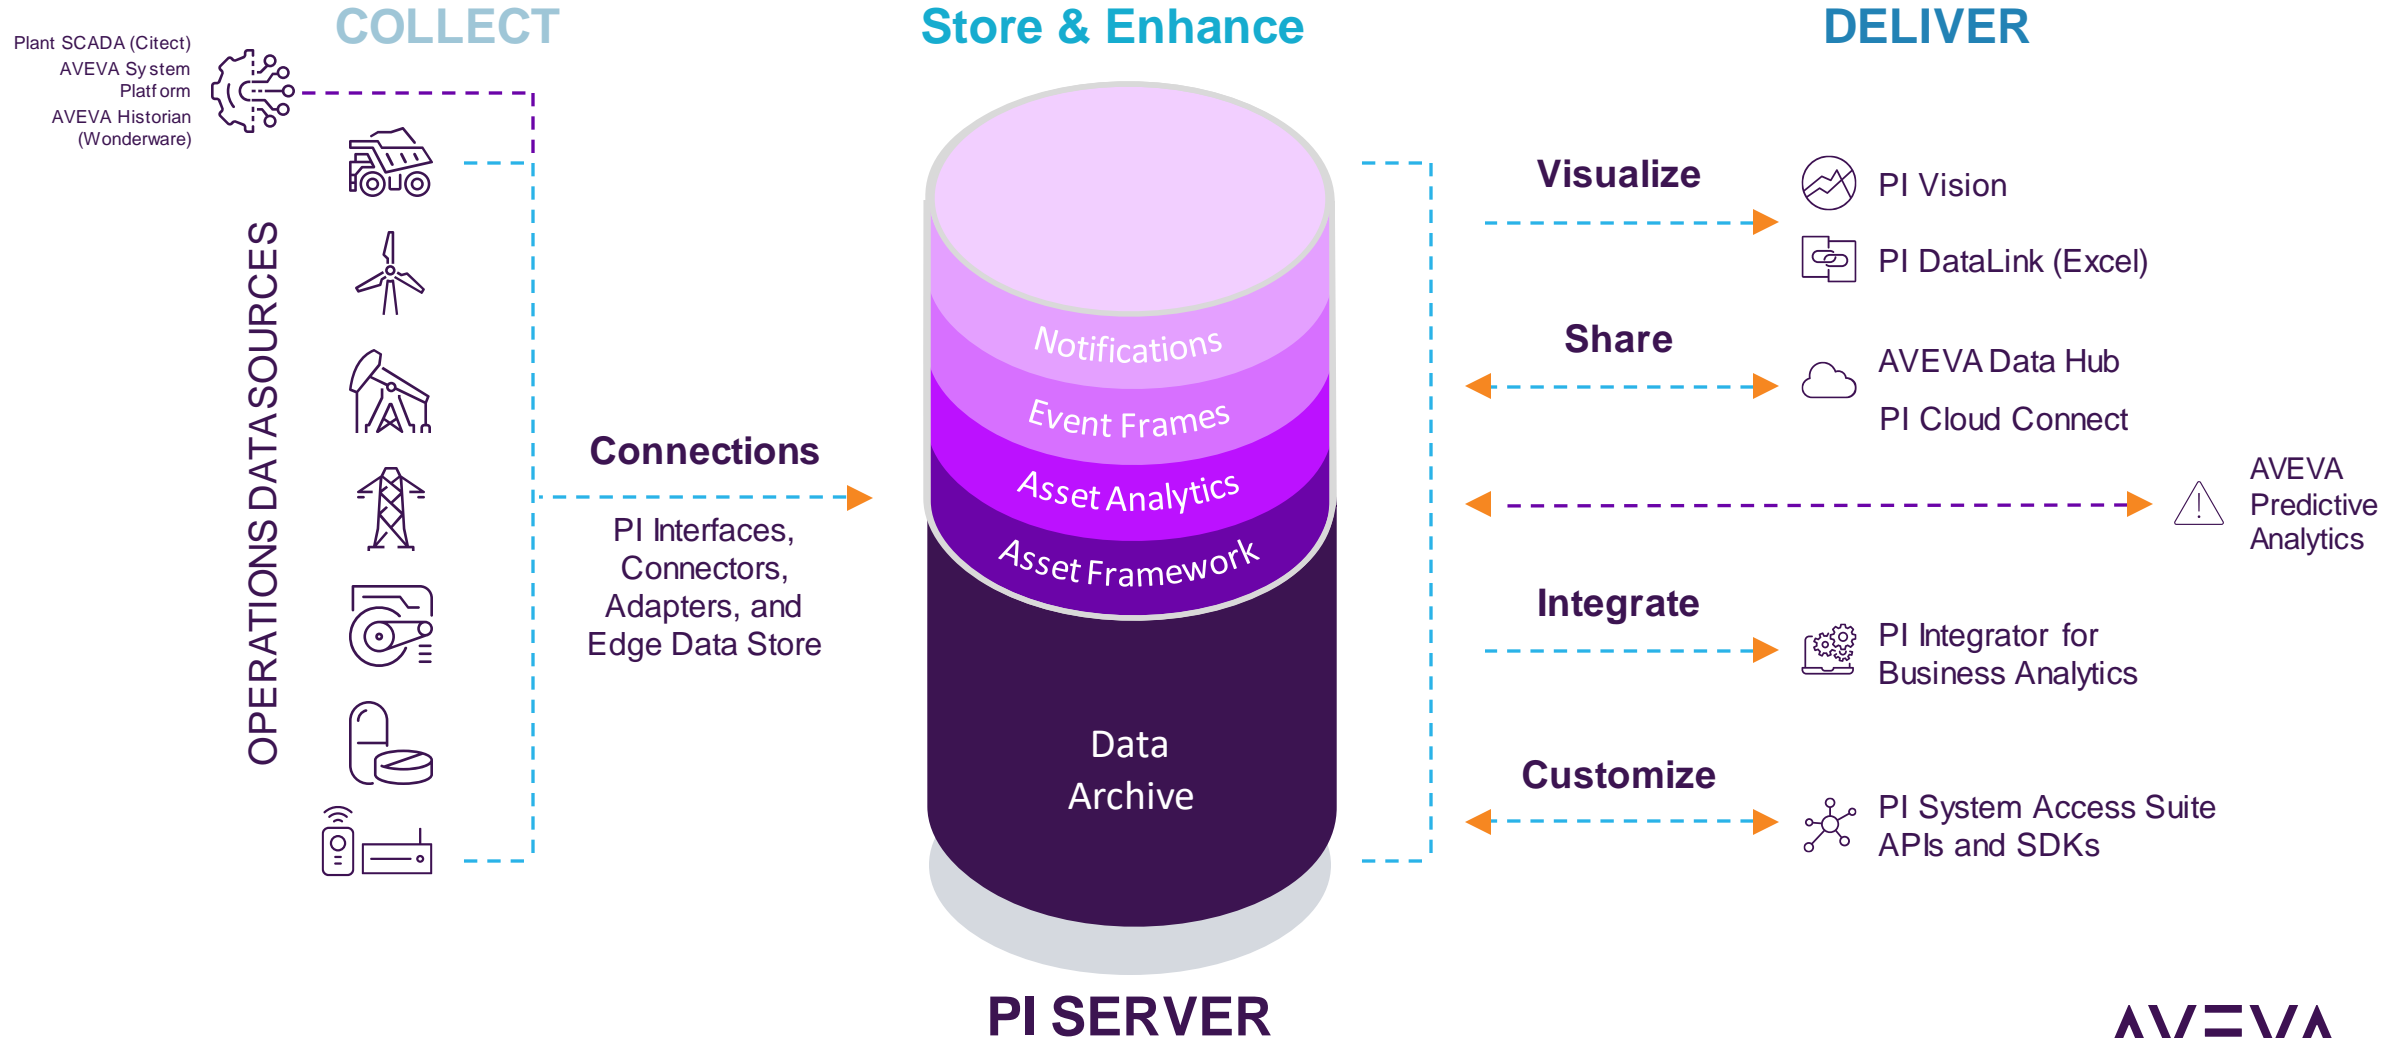

AVEVA PI System's edge to plant to cloud data management

An integrated, edge-plant-cloud architecture supports OT, IT and IIoT use cases

The On-prem PI System

PI Server

PI Server is the real-time data storage, normalization, analytics, and notification engine at the **heart of on-prem deployments.**

- Single source of truth for all users
- Layered capabilities enhance operations data

PI Server

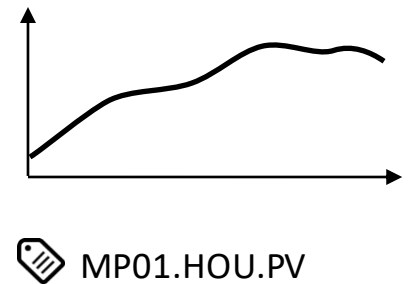

Data Archive

Optimized storage & access to massive volumes of operational data

- Store millions of data streams and thousands of values per second over multiple decades
- Maintain the original fidelity of your data
- Keep your data online for immediate, real-time retrieval
- Store future data from predictive models and other sources

PI Server

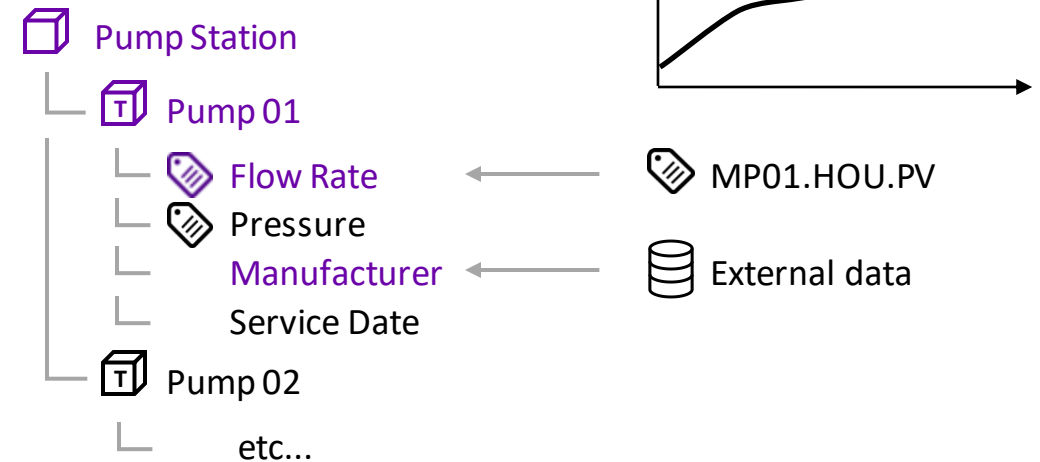

Asset Framework

Organize and contextualize your operational data in a way that makes sense to users across your enterprise — not just SCADA experts

- Label data with human-friendly names
- Group related data into assets
- Add metadata and context manually or from external systems
- Standardize groupings, labels, and units with templates

PI Server

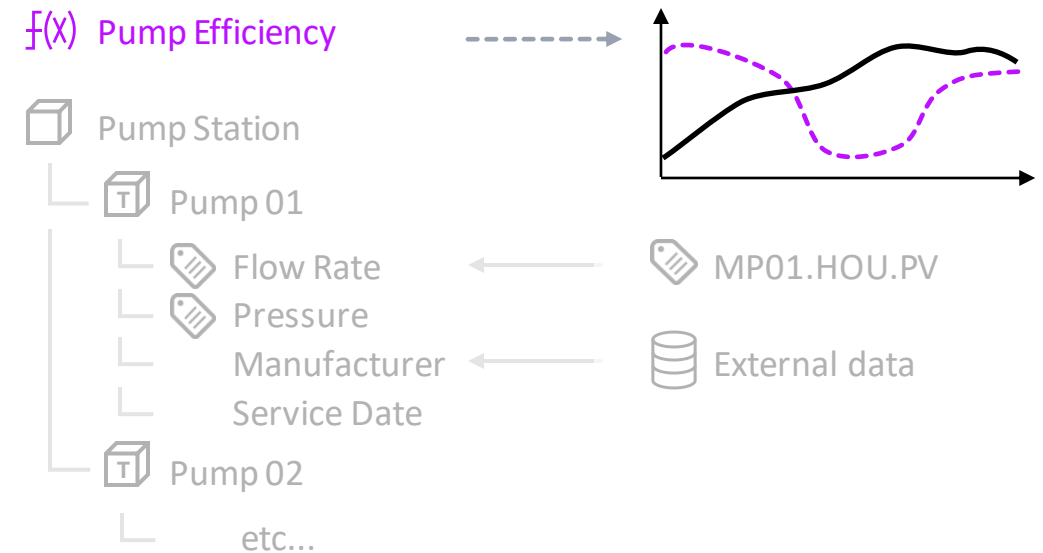

Asset Analytics

Standardize and centralize your operations calculations and KPIs with continuous real-time results

- Easy-to-use interface and a rich set of built-in functions
- Migrate equations from Excel or other tools
- Templatize and roll out calculations across multiple assets in bulk
- Backfill calculation results as far back as you have source data

PI Server

Asset Analytics

Standardize and centralize your operations calculations and KPIs with continuous real-time results

- Easy-to-use interface and a rich set of built-in functions
- Migrate equations from Excel or other tools
- Templatize and roll out calculations across multiple assets in bulk
- Backfill calculation results as far back as you have source data

Examples

Calculate daily average flow rate

```
TagAvg('Pump Flow Rate', 'YESTERDAY', 'NOW')
```

Convert numbers to a status

```
IF 'Current Draw' > 1 THEN "On" ELSE "Off"
```

See how long an asset has been running since maintenance

```
TimeEq(Status, Service Date, 'NOW', "Running")
```

Attributes*

↑
Time

Event Frames

Automatically **bookmark important events** in your operations

- Find the minute that matters in a decade's worth of data
- Capture events based on user-defined process thresholds or other KPI triggers
- Store related context and calculations within Event Frames
- Easily analyze and compare these events in bulk

PI Server

 Low Efficiency Event

$f(x)$ Pump Efficiency

 Pump Station

 Pump 01

 Flow Rate

 Pressure

 Manufacturer

 Service Date

 Pump 02

 etc...

Event Frames

Automatically **bookmark important events** in your operations

- Find the minute that matters in a decade's worth of data
- Capture events based on user-defined process thresholds or other KPI triggers
- Store related context and calculations within Event Frames
- Easily analyze and compare these events in bulk

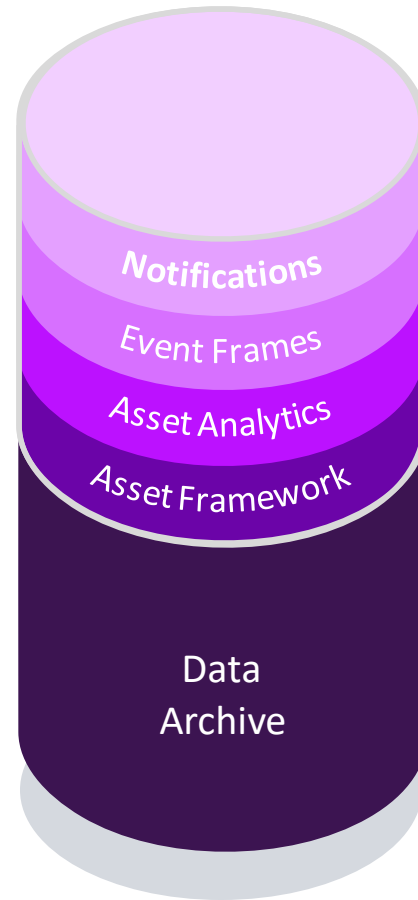

Examples

- Anomalies, failures, KPI changes
- Downtime, curtailment, production loss
- Batches (recipes, units, procedures, phases)
- Repeating events: start-up, shift performance

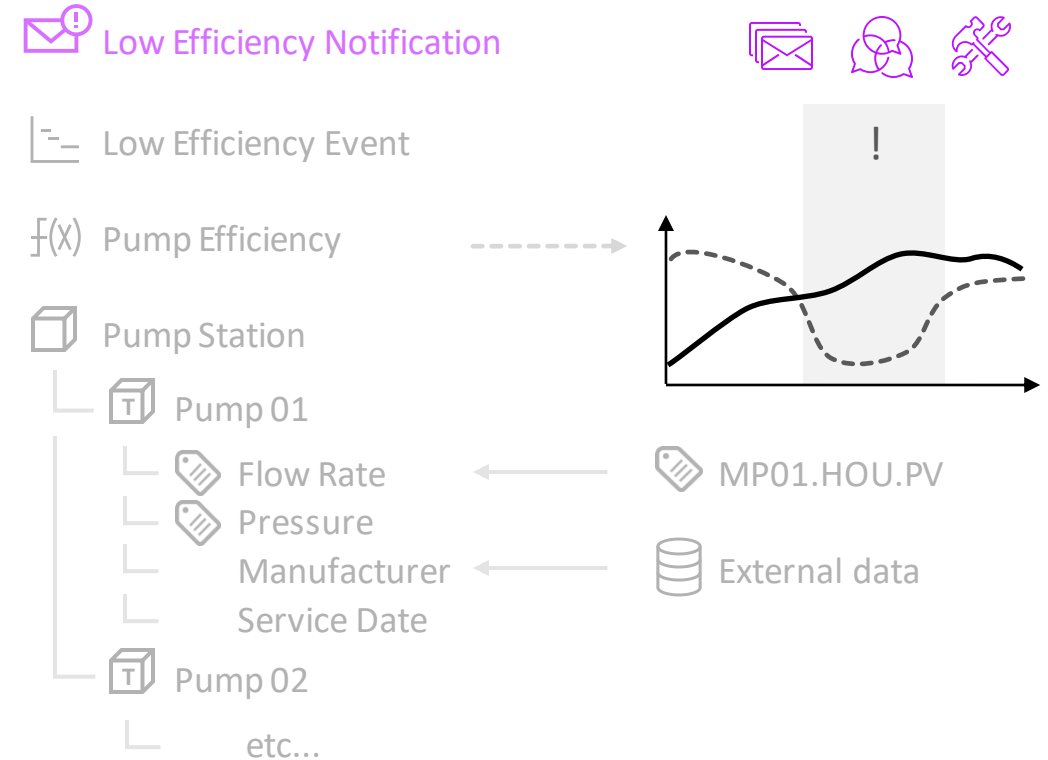

Notifications

Automatically send alerts to the right people with the right information

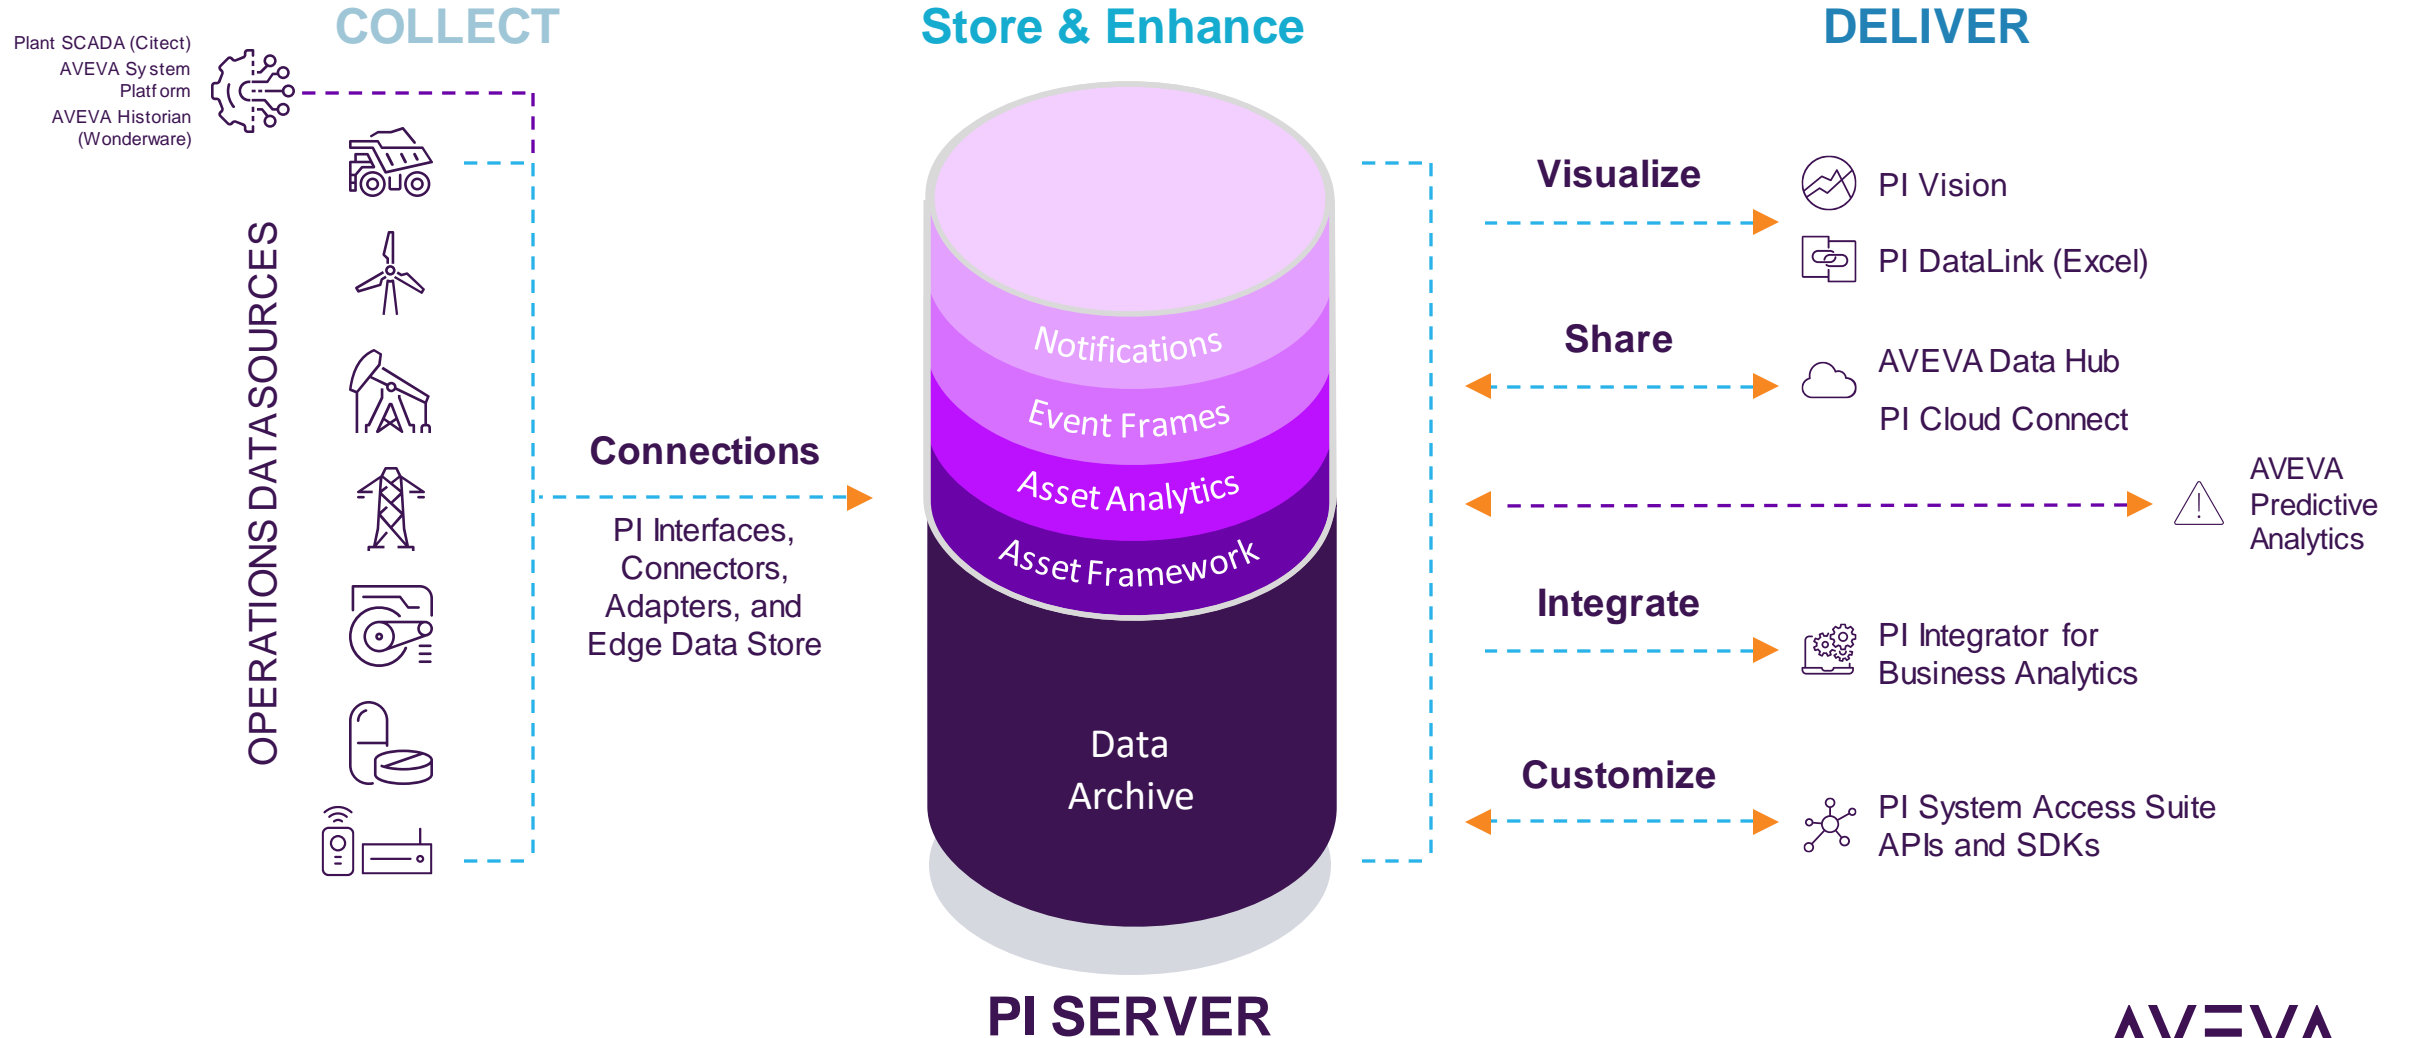

- Configure notification emails to contain values, trends, links, and attachments
- Design specific email formats for different recipients
- Send to individuals or groups, and automatically escalate if unacknowledged
- Send directly to web services for integrating with 3rd-party systems

PI Server

The PI System

PI Server turns data into decision-ready information
